

Proposed CEA Link — December 2026

The existing 20-line link, widened to 24 people, with the closing turn starting at 15:45 — the same shape of week, one more cover cycle, and one turn a little longer to keep the contract

Prepared 12 September 2026 · built for the December 2026 timetable and assessed by the workspace's own rule modules · figures on this page are computed, not typed

PROPOSAL

Quarter To

Same Turns, with the closing turn starting at quarter to four

CODE **QT-24-Q34**

FINGERPRINT **70cf9874**

BUILT FROM duty table Q · seed 34 · 24 lines · 4 cover weeks

LINEAGE Family QT — "Same Turns" (ST-24-B7 · d15e1b74) with two things asked for: the weekday closing turn starts 15:45, not 15:15, and no duty runs over 8h40. The later start is thirty minutes off three duties a day, and the contract is exact, so the two 06:20 openers run on at their finish to put the minutes back; the table letter says how far (Q to 14:00 and 14:50, Saturday's own opening times; R to 14:30). Saturday and Sunday are unchanged. Compare with "Same Turns" and "By the Book" (BB-24-D7 · 0f14abce).

✓ **24** lines designed

✓ **35h 00m** a week — exactly the contract

✓ **0** hard-limit breaches

✓ **0** rests under 12h

✓ **0** fatigue factors present (today: 5)

What this is

A proposal for the CEA link once the December 2026 timetable arrives, for a team of 24 rather than 20 — *Same Turns* with two things asked for: the weekday closing turn starts at **15:45** rather than 15:15, and no duty runs over 8h40. Everything else that brief kept is kept — a week is one turn, rest days come in pairs, four whole cover weeks spread round the rotation, the same 06:20 / 08:00 / 14:00 clock times — together with the December staffing shape (four to open every day, three through to the close, four on a Saturday, five still on at 22:00, fourteen on a Saturday, ten on a Sunday) and every rule the link is assessed against: Chiltern's 13-day limit, twelve hours between duties, the exact 35-hour contracted week, and the ORR's good-practice fatigue factors.

A later start is a shorter turn. Thirty minutes off three duties a day is 450 minutes a week, and the contract is an equality, so those minutes have to go back somewhere — and with today's turns alone no table pays it. The second rule, no duty over 8h40, rules out lengthening a middle or late turn; so the two 06:20 openers run on at their finish: 06:20-13:45 to 14:00 (2 people, 15 minutes each) and 06:20-14:20 to 14:50 (2 people, 30 minutes each). Those finishes are Saturday's own opening turns, so the 15:45 closer is the only time on the sheet nobody works today, and every weekday duty is 8h30 or under. The search then arranged the duties across 24 lines exactly as *Same Turns* was built, with the workspace's own modules scoring every candidate. Page 7 says how, and how to reproduce it.

What it is not. Not a recommendation and not a finished roster: nothing here has been through the roster office or a rep. The 24-line length, the four cover weeks and the December headcounts are owner-relayed figures with no document behind them (evidence class C), and the 13-day limit's policy citation is still outstanding — pages 5 and 6 say so where it applies. It clears every rule the tool can check, which is the floor for being worth discussing.

THE ROTATION

The 24-line link

Sunday to Saturday per line; everyone moves down one line each week and line 24 goes back to line 1. Hours and days at the right, cover beneath.

Busiest weekday · Saturday · Sunday. The first three columns are what the 20-line link does now; the last three are the proposal. Green cells grew, amber shrank, a struck-through row is a time the proposal does not use.

The 15:45 closer is 30 minutes shorter than the 15:15 turn it replaces — three a day, 450 minutes a week — and with today's turns alone no table reaches 42,000 exactly. The two 06:20 openers run on to put them back: 06:20–13:45 to 14:00 (2 people, 15 minutes each) and 06:20–14:20 to 14:50 (2 people, 30 minutes each), 450 minutes a week — and those are Saturday's own opening times. Nothing runs over 8h30; the other ways of doing it under the 8h40 rule are on page 7.

Why the extra duties land where they do: a weekday needs 6,980 minutes and a Saturday 7,100 for 5 weekdays + 1 Saturday to total exactly $20 \times 35h = 42,000$ — an equality, so the table is one of the few combinations of today's turn lengths that reaches it to the minute. Today's three weekday openers — 06:20–13:35, 06:20–13:45 and 06:20–14:20 — fold into Saturday's two, 06:20–14:00 and 06:20–14:50; Sunday gains an 11:00–19:30 middle turn from the weekday vocabulary.

People on duty, hour by hour

Cover today and proposed against the measured December 2026 timetable (arrivals and departures, weighted by train length). A darker orange hour carries more of the day's traffic.

Spare cover is not in these figures — a cover week carries no times, so the rows are a floor. Sunday: 5 December movements fall after the 23:25 finish (the last at 23:54, three of them arrivals) — the standing question on whether Sunday's window moves; the window is stored per design, so the proposal can be rebuilt to either answer.

Reading it. The proposal raises the whole day rather than reshaping it, which is what the December brief asked for — the station rosters posts (ticket office, gateline, passenger assist) plus break cover, and a post needs someone on it whether the hour carries 23 trains or 5. The one hour the search was allowed to favour is Saturday's 17:00–22:00, for events. The weekday's two peaks are a duty length apart, so cover stays fairly flat between them by arithmetic, not neglect.

The checks sheet

Hard limits first — met or not. Then the ORR good-practice fatigue factors, which report what is present and never pass or fail a design.

Hard limits — a design either meets these or cannot be run

- ✓ **More than 13 consecutive days worked** — longest possible run **6** days (today: 9)
Longest possible run is 6 days, within the 13 configured here from Chiltern practice (origin: the legacy Hidden standard). A spare week is 4 duties of 7 and the roster clerk places them, so this is the worst case the link allows. Worked as a BLOCK of four rather than split day-on-day-off, the answer is the same — **6** days — so this row does not depend on how a cover week is placed.
Basis: Chiltern roster policy, citation outstanding — legacy Hidden 13-in-14 standard. Configured from Chiltern practice; the policy citation is outstanding, so this is stated as the app states it.
- ✓ **At least 12 hours between duties** — **0** rests under 12h anywhere in the rotation, Saturday-into-Sunday and line-into-line included (today: 0)
The generator refuses a design it cannot repair to this; the search here never produced one.
- ✓ **The contracted week, exactly** — **35h 00m** average Mon-Sat over the 24 lines, cover weeks counted as contracted weeks
700h of duty a week across 20 working lines. Sundays (85.75h) sit on top as RDW, as they do today. Individual weeks range 25h 30m–43h 10m; only the average is the contract.

December design figures — the staffing shape agreed for the new timetable

RULE	PROPOSAL	
Four on at the open, every day	✓ 4 weekday · 4 Saturday · 4 Sunday	
Three through to the close; four on a Saturday	✓ 3 weekday · 4 Saturday · 3 Sunday	
Five still on duty at 22:00	✓ 5 weekday · 5 Saturday	a 22:00 finish is not "on at 22:00"
Fourteen on a Saturday, ten on a Sunday	✓ 14 · 10	
Four cover weeks, evenly spread	✓ lines 1, 7, 13, 19 — gaps 6, 6, 6, 6	whole weeks, never scattered days
About 4.2 days a week worked, Mon-Sat	✓ 4.20 over the 20 working lines	
No :05 or :10 times except the open and close	✓ none	today's times already obey this
Late turns slightly shorter than most earlies	× weekday not met (lates 8h10–8h30, earlies 7h40–8h30) · Saturday not met (lates 7h30–9h10, earlies 7h40–8h30) · Sunday not met (lates 8h00–8h55, earlies 8h30–8h30)	incompatible with keeping today's times: meeting it needs 9h+ earlies or 15 duties a day — flagged for decision, below

Two things to settle before it is frozen

The weekend's two long turns. The rule was no duty over 8h40, and every weekday duty here is 8h30 or under — but Saturday's 14:45–23:55 (9h10) and Sunday's 14:30–23:25 (8h55) are today's own turns, carried over from *Same Turns* unchanged. Shortening Saturday's closer to 8h40 leaves 7,004 minutes a weekday, which no table of today's turns reaches, so the cap is read here as governing what the proposal introduces; if it is meant to reach the weekend too, Saturday's table has to be redesigned, and that is a different proposal. **The openers' finish.** Moving the closer to 15:45 takes 30 minutes off three duties a day, and the contract is exact, so the two 06:20 openers run on — 06:20 to 14:00 and 06:20 to 14:50, which are Saturday's own opening times; the other ways of doing it are on page 7. **Late-turn length** is inherited from *Same Turns* and still not met. **Sunday's finish** — five December movements fall after 23:25; the proposal inherits today's window deliberately rather than deciding it.

ORR fatigue factors

Present: 0 (today 5) · standing: 2 · FF2 fires on every 06:20 duty, so it is a property of the station's opening time rather than of any design. **Two readings of a cover week, on the one row they move.** A cover week is worked four days of seven and the link does not say which four, so a run figure is a range. The headline number is the ceiling — the four split day-on-day-off, which supplies no 48-hour break and joins the blocks either side. It is reachable: of the 35 ways to place four duties in seven days, the 10 that leave no two rest days together produce exactly it. Worked as a BLOCK, which is what a cover week looks like on the roster, the three rest days fall together and the week always supplies a break — that is the *as rostered* figure beneath it. Checked on every row: FF11 is the only one where the two differ. Which reading applies is a question for the roster office, not for this sheet. This sheet is an aid to a conversation, not a fatigue risk assessment.

How it was chosen, and how to load it

Reproducible: the same table, seed and objective give the same grid on any machine

How it was chosen

1 • The table. *Same Turns'* table B with the closing turn at 15:45, under a second rule: no duty over 8h40. Every December duty table was re-enumerated from today's shift times with that substitution — every count of each turn on each day class, opening with four, closing with three (four on Saturday), five on at 22:00 — and none totals exactly 42,000 Mon–Sat minutes: the later start takes 450 minutes a week out of a contract that is an equality. Letting one or two other weekday turns keep their start and finish 15, 30 or 45 minutes later, with nothing over 8h40, 42 tables reach it and three do so with every count exactly as table B has it; all three run the 06:20 openers on, because stretching a middle or a late turn breaks the cap. Two were searched — **Q**, the openers to 14:00 and 14:50 (Saturday's own opening times, so no new time but the closer), and **R**, the 06:20–13:45 opener to 14:30; the third, to 14:15 and 14:35, adds two new times for no gain. All three follow the December curve identically. Table **Q** won: rules first, fit second, then fewest times nobody works today, then the search's own score. Saturday and Sunday are *Same Turns'* own (table-late.mjs).

2 • The grid. Simulated annealing over the 24-line grid: 100,000 candidate arrangements per restart, five restarts from different random starting points per run, four seeded runs per table, two tables — over a million candidates in all — then a steepest-descent polish of every same-day swap and every pair of lines. Every move keeps each day's duties exactly as the table says — a swap between two lines on one day, or two whole lines changing places — so the coverage, the contract and the headcounts are true by construction and only the SHAPE is searched. Cover weeks stay at lines 1, 7, 13 and 19 throughout.

3 • The judge. Every candidate was scored by the workspace's own modules — `runDesignChecks`, `assessFatigue`, `assessHardLimits`, `scoreOrder` — with a rest under 12h or a run past six days costing more than everything else combined, fatigue factors next, and then the feel terms: a week on more than one turn, a single rest day between duties, fewer than four or more than five days, and the week-to-week step. Weekends off and long weekends were rewarded. Last, the app's line-order optimiser was offered the result and kept only where it improved that score.

Paste it into the workspace

Links → Import, then paste the block on page 8. Line number, then Sunday to Saturday; SP is a cover week. The workspace re-runs every check on these pages from the pasted cells, so nothing here has to be taken on trust — and the two designers can edit it there like any other design.

The same rotation is also supplied as `proposal-import.txt` (tab-separated, pastes directly) and `proposal.json` (the app's own format).

Alternatives measured

DESIGN	RUN	FF PRESENT	WKENDS	ONE-TURN	STEP	WK FIT	SCORE
QT-24-Q34 · 70cf9874 — Quarter To (this proposal)	6	0	6	19/20	2h 53m	58.5	5638
QT-24-Q7 · e5125cd0 — runner-up	6	1	6	18/20	3h 19m	58.5	6844
QT-24-R7 · a0cc7c1e	6	1	6	20/20	3h 16m	68.1	626
Workspace default · 29ec9810 (Dec 2026 table, generated)	7	5	5	0/20	4h 16m	41.1	2192436
ST-24-B7 · d15e1b74 — Same Turns (a sibling proposal)	6	1	6	18/20	2h 33m	58.5	—
BB-24-D7 · 0f14abce — By the Book (a sibling proposal)	6	0	6	12/20	2h 52m	41.1	—
Today's 20-line link (for scale)	9	5	4	7/16	4h 0m	56	—

How the winner was picked: rules first (rest, run, fatigue factors present, weekends off), then *Wk fit* — how evenly the weekday cover follows the December traffic curve (lower is better; today's link scores what it scores). fatigue factors present decided it (0 against 1 for the runner-up). The other 5 seeded results are in results/ (R34, R13, Q21, R21, Q13); none stands higher on the pick than the rows shown. Score is the search's own feel objective (lower is better) and is not a verdict. The workspace default is the app's own December table, generated and reordered with every switch on — a good design by every panel, and not one that resembles today's.

LOAD IT

The rotation, ready to paste

Line number, then Sunday to Saturday. SP is a cover week. Paste the whole block into Links → Import.

Prepared 12 September 2026. Every figure in this document was computed by the Marylebone Roster app's Links modules from exactly these cells; import them and the workspace's Design checks, hard limits, fatigue factors and coverage cards will restate them.
