

Proposed CEA Link — December 2026

Clean Final with three cells retimed — the Sunday afternoon bulge broken, the Saturday morning dip filled, and a fourth pair of hands on the Sunday open

Prepared 22 September 2026 · built for the December 2026 timetable and assessed by the workspace's own rule modules · figures on this page are computed, not typed

PROPOSAL

Clean Final Tuned

Clean Final with three cells retimed — the Sunday bulge broken and the Saturday morning filled

CODE

CFT-24-M3

FINGERPRINT

ae1a15bd

BUILT FROM

duty table — · seed — · 24 lines · 4 cover weeks

LINEAGE

DERIVED, not supplied and not searched: it is "Clean Final" (CF-24-EXT · 6d21169b) with THREE cells retimed, and nothing else. The code's M3 counts those three moves — it is not a table or a seed, because no table was enumerated and no grid annealed. Each move keeps its duty's LENGTH, so the contract, the headcounts, the cover weeks and every line's 35h are invariant by construction rather than by re-checking.

✓ **24 lines** designed

✓ **35h 00m** a week — exactly the contract

✓ **0** hard-limit breaches

✓ **0** rests under 12h

⚠ **3** fatigue factors present (today: 5)

11 of 23

shift times are today's

12 times are new; the rest are turns people already work

9 days

longest run of worked days

today's link reaches 9; Chiltern's limit is 13

2 of 20

working weeks are one turn

same clock time all week, as 7 of today's 16 are

4 in 24

full weekends off

17% of the rotation, against 20% today (4 in 20)

4 cover weeks

lines 1, 7, 12, 17

four weeks at lines 1, 7, 12 and 17 — gaps of 8, 6, 5, 5 around the wheel, exactly as the parent has them: no move touched a cover week

3h 59m a week

typical week-to-week move

how far the working day shifts each week — today's link moves 4h 0m a week

What this is

A proposal for the CEA link once the December 2026 timetable arrives, for a team of 24 rather than 20. The brief was to keep the **feel** of the link people work today — a week is one turn, rest days come in pairs, four whole cover weeks spread round the rotation, and the same 06:20 / 08:00 / 14:00 / 15:15 clock times — while meeting the staffing shape agreed for December (four to open every day, three through to the close, four on a Saturday, five still on at 22:00, fourteen on a Saturday, ten on a Sunday) and every rule the link is assessed against: Chiltern's 13-day limit, twelve hours between duties, the exact 35-hour contracted week, and the ORR's good-practice fatigue factors.

This is not a new link. It is **"Clean Final" with three cells retimed**, and the point of it is the size of the change: three cells out of 168, three people's single days, against a demand misfit cut by a fifth.

Measured against the December curve the way every proposal here is measured — the squared gap between each hour's share of demand and its share of cover, lower being better — the parent's seven days score **Mon 34.4 · Tue 46.9 · Wed 51.9 · Thu 60.8 · Fri 38.3 · Sat 28.5 · Sun 62.4**. The three moves touch **Saturday, which falls to 20.5**, and **Sunday, which falls to 44.9** — each a 28% improvement. The five weekdays are not touched and score exactly as before. **The Wk fit column opposite reports TUESDAY alone**, as it has for every proposal in this series, which is why it reads 46.9 for this design and for its parent alike: it is correct, and it is not the whole picture.

What it is not. Not a recommendation and not a finished roster: nothing here has been through the roster office or a rep. The 24-line length, the four cover weeks and the December headcounts are owner-relayed figures with no document behind them (evidence class C), and the 13-day limit's policy citation is still outstanding — pages 5 and 6 say so where it applies. It clears every rule the tool can check, which is the floor for being worth discussing.

THE ROTATION

The 24-line link

Sunday to Saturday per line; everyone moves down one line each week and line 24 goes back to line 1. Hours and days at the right, cover beneath.

LINE	SUN	MON	TUE	WED	THU	FRI	SAT	MON-SAT hours	ALL WEEK hours	DAYS WORKED Mon-Sat

Early turns Late turns Cover (spare) week — four duties of seven, any turn Rest day

Mon-Sat hours average 35h 00m over 24 lines, a cover week counted as a contracted week · days worked average over the 20 working lines

What the three moves bought

Sunday and Saturday fit, against a weekday column that deliberately did not move

Kept — the shape of a week

MEASURE	TODAY (20)	PROPOSED (24)
Working weeks that are one turn (one clock time Mon–Fri)	7 of 16	2 of 20
Weeks mixing early and late turns	7	7
Rest-day breaks that are two days or more	13 of 17	14 of 28
Single rest days between duties (not a 48h break)	4	14
Days worked in a week (lines × days)	1×3, 3×4, 11×5, 1×6	1×3, 5×4, 11×5, 3×6
Cover (spare) weeks (whole weeks)	lines 1, 7, 12, 17	lines 1, 7, 12, 17
Distinct shift times (all already on today's roster)	18	23
Mon–Sat hours, average week (the contract)	35h 00m	35h 00m
Sunday duties (not contracted; half the working lines)	8 of 16 lines	9 of 20 lines

Changed — the December headcount

PEOPLE ON DUTY	TODAY	PROPOSED	WHY
Monday to Friday	12	15	the contract: 20 working lines × 35h has to be worked somewhere
Saturday	10	12	owner's figure for December, leaning late for events
Sunday	8	9	owner's figure for December
Opening at 06:20 (07:15 Sunday)	4	4	unchanged
Through to the 23:55 close, weekday	2	3	three to close
Through to the close, Saturday	2	4	four on a Saturday
Still on duty at 22:00	4	5	five are enough from 22:00

The duty table, in today's times

Busiest weekday · Saturday · Sunday. The first three columns are what the 20-line link does now; the last three are the proposal. Green cells grew, amber shrank, a struck-through row is a time the proposal does not use.

Why the duties land where they do: Monday to Saturday totals exactly 42,000 minutes — 20 × 35h to the minute — and it could not have come out otherwise, because all three moves preserve duty length. The daily split is the parent's, unchanged: Mon 6,225 · Tue 7,205 · Wed 7,205 · Thu 7,780 · Fri 7,690 · Sat 5,895 minutes. Saturday is still the lightest day and Thursday the heaviest, a spread of nearly two duties — that question belongs to the parent and is not answered here. What DID change is where two of Sunday's nine people and one of Saturday's twelve stand in the day, and the coverage rows opposite show it.

People on duty, hour by hour

Cover today and proposed against the measured December 2026 timetable (arrivals and departures, weighted by train length). A darker orange hour carries more of the day's traffic.

Spare cover is not in these figures — a cover week carries no times, so the rows are a floor. Sunday: 5 December movements fall after the 23:25 finish — the standing question on whether Sunday's window moves; the window is stored per design, so this proposal can be rebuilt to either answer.

Reading it. The proposal raises the whole day rather than reshaping it, which is what the December brief asked for — the station rosters posts (ticket office, gateline, passenger assist) plus break cover, and a post needs someone on it whether the hour carries 23 trains or 5. The one hour the search was allowed to favour is Saturday's 17:00–22:00, for events. The weekday's two peaks are a duty length apart, so cover stays fairly flat between them by arithmetic, not neglect.

The checks sheet

Hard limits first — met or not. Then the ORR good-practice fatigue factors, which report what is present and never pass or fail a design.

Hard limits — a design either meets these or cannot be run

- ✓ **More than 13 consecutive days worked** — longest possible run **9** days (today: 9)
Longest possible run is 9 days, within the 13 configured here from Chiltern practice (origin: the legacy Hidden standard). A spare week is 4 duties of 7 and the roster clerk places them, so this is the worst case the link allows.
Basis: Chiltern roster policy, citation outstanding — legacy Hidden 13-in-14 standard. Configured from Chiltern practice; the policy citation is outstanding, so this is stated as the app states it.
- ✓ **At least 12 hours between duties** — **0** rests under 12h anywhere in the rotation, Saturday-into-Sunday and line-into-line included (today: 0)
The generator refuses a design it cannot repair to this; the search here never produced one.
- ✓ **The contracted week, exactly** — **35h 00m** average Mon–Sat over the 24 lines, cover weeks counted as contracted weeks
700h of duty a week across 20 working lines. Sundays (77.25h) sit on top as RDW, as they do today. Individual weeks range 24h 25m–47h 10m; only the average is the contract.

December design figures — the staffing shape agreed for the new timetable

RULE	PROPOSAL	
Four on at the open, every day	× 4 weekday · 5 Saturday · 4 Sunday	
Three through to the close; four on a Saturday	× 3 weekday · 3 Saturday · 4 Sunday	
Five still on duty at 22:00	✓ 5 weekday · 5 Saturday	a 22:00 finish is not "on at 22:00"
Fourteen on a Saturday, ten on a Sunday	× 12 · 9	
Cover weeks, evenly spread	× 4 weeks at lines 1, 7, 12, 17 — gaps 8, 6, 5, 5	the December shape asks for FOUR (DEFAULT_COVER_WEEKS), evenly spread — this row fails on the SPREAD, not the count
About 4.2 days a week worked, Mon–Sat	✓ 4.35 over the 20 working lines	
No :05 or :10 times except the open and close	✓ none	
Late turns slightly shorter than most earlies	× not met — lates 7h30–8h40, earlies 7h15–8h30	the longest late is longer than the longest early

Five things to settle before it is frozen

Sunday now closes with four, where the shape asks three. This is the one December rule the three moves BREAK, and it is worth arguing rather than fixing: 22:00 was Sunday's deepest shortfall in the parent, so the rule and the measured demand disagree here and the move sides with the demand. If the rule wins, drop the first move — and Sunday goes back to 62.4. **Sunday now opens with four, which is the rule met,** where the parent opened with three. That is the third move, and it is why a fourth was refused: the best fourth move available took it straight back to three for 2.6 points of fit. **One rest gets tighter.** Line 8 works Friday 14:00–22:30; its Saturday moving to 11:00 cuts that turnaround from 15h00 to **12h30** — the tightest rest anywhere here, half an hour above the 12h floor. An 11:30 start would hold 13h00 and give back 2.7 points of Saturday fit. That is the only one of the three moves that costs anybody anything. **Thursday is now the worst-fitting day in the design, at 60.8.** Nothing here addresses it: it is also the heaviest day by minutes (7,780 against Monday's 6,225), and the two facts are the same fact. That is the next question, and it is a weekday-table question rather than a three-cell one. **Everything else the parent did not answer, it still does not.** Saturday opens with five and closes with three against four and four; Saturday carries 12 people against 14 and Sunday 9 against 10; 4.35 days a week against 4.2; the longest late is 8h40 against a longest early of 8h30; five December movements fall after Sunday's 23:25 finish. None of these moved, because none is a question three retimes can answer.

ORR fatigue factors

Good practice guidelines — Fatigue Factors, p3 (December 2021). Δ present · ✓ clear · ● standing, a property of the operation · – not applicable. Nathan assesses against this list.

FF13	Less than 12h rest in any 24h Intervals between duties	✓ 0	✓ 0

Present: 3 (today 5) · standing: 2 · FF2 fires on every 06:20 duty, so it is a property of the station's opening time rather than of any design. A cover week's four duties are counted in the worst case for every run figure. This sheet is an aid to a conversation, not a fatigue risk assessment.

The three moves, and how to load it

Not a search — a bounded retime of a design that already existed, with every figure computed from the cells

Where this design came from

1 • Three cells, and the reason there are only three.

The parent design was measured hour by hour against the December demand curve and the misfit was not spread evenly — Sunday carried half of it on its own. So rather than re-search the link, each individual cell was tested against every retime of ± 4 hours, and the best was taken, three times over. The moves are: **line 21 Sunday 13:30–22:00 → 14:55–23:25, line 8 Saturday 13:30–21:00 → 11:00–18:30, and line 20 Sunday 08:30–16:30 → 07:15–15:15**. Nothing else in the 168 cells differs from the parent.

2 • Why nothing else could move. Every retime keeps the duty's length to the minute. That is not a convention observed carefully — it is what makes the Monday-to-Saturday total, every line's 35h, both headcounts, the four cover weeks and the longest worked run *impossible* to change, rather than merely unchanged. The search was also refused any move that took the tightest rest in the whole design below 12h30, or that moved the day's open or close, or that produced a :05 or :10 time.

3 • Where it stops. A fourth move was available and was rejected: it bought 2.6 points of fit by taking Sunday's open back from four people to three — giving back the December rule the third move had just met. This is a bounded improvement to somebody else's design, not a recommendation, and it carries all of the parent's class-C caveats unchanged.

Paste it into the workspace

Links → Import, then paste the block on page 8. Line number, then Sunday to Saturday; SP is a cover week. The workspace re-runs every check on these pages from the pasted cells, so nothing here has to be taken on trust — and the two designers can edit it there like any other design.

The same rotation is also supplied as proposal-import.txt (tab-separated, pastes directly) and proposal.json (the app's own format).

Alternatives measured

DESIGN	RUN	FF PRESENT	WKENDS	ONE-TURN	STEP	WK FIT	SCORE
CFT-24-M3 · ae1a15bd — Clean Final Tuned (this proposal)	9	3	4	2/20	3h 59m	46.9	—
Same Turns · d15e1b74 — the searched proposal	6	1	6	18/20	2h 33m	58.5	—
By the Book · 0f14abce — the searched proposal	6	0	6	12/20	2h 52m	41.1	—
Clean Final — the parent, before the three moves · 6d21169b	9	3	4	2/20	3h 56m	46.9	—
Workspace default · 29ec9810 (Dec 2026 table, generated)	7	5	5	0/20	4h 16m	41.1	—
Today's 20-line link (for scale)	9	5	4	7/16	4h 0m	57.7	—

How to read this table: nothing here was picked by a search — this design was supplied or derived, and the rows are the comparisons it is being judged against. *Wk fit* is how evenly the WEEKDAY cover follows the December traffic curve (lower is better; today's link scores what it scores), so it says nothing about Saturday or Sunday. **Score** is the search's own feel objective and is blank here, because no search produced this design — a blank is not a bad score. The workspace default is the app's own December table, generated and reordered with every switch on.

LOAD IT

The rotation, ready to paste

Line number, then Sunday to Saturday. SP is a cover week. Paste the whole block into Links → Import.

Prepared 22 September 2026. Every figure in this document was computed by the Marylebone Roster app's Links modules from exactly these cells; import them and the workspace's Design checks, hard limits, fatigue factors and coverage cards will restate them.
