

Proposed CEA Link — December 2026

The December 2026 timetable rules with no duty over 8h40 and the ticket office written in — two 14:00–22:30 turns a day Monday to Saturday, two 13:30–22:00 on a Sunday — judged on the ORR fatigue factors

Prepared 22 September 2026 · re-rendered 28 September 2026 · built for the December 2026 timetable and assessed by the workspace's own rule modules (Marylebone Roster v24.35) · figures on this page are computed, not typed

PROPOSAL

By the Book 2

Eight Forty, with the ticket office rostered — two 14:00–22:30 a day

CODE **B2-24-G21**

FINGERPRINT **02f3c005**

BUILT FROM duty table G · seed 21 · 24 lines · 4 cover weeks

- ✓ **24** lines designed
- ✓ **35h 00m** a week — exactly the contract
- ✓ **0** hard-limit breaches
- ✓ **0** rests under 12h
- ✓ **0** fatigue factors present (today: 5)

Five questions a manager asks first, in order. Every figure is computed from the cells; **page 2 says how to read each one**, with today's link and the rest of the folder marked on a scale.

CAN IT BE RUN?

Yes

the hard limits

0 rests under 12h · longest run 6 of 13 · contract exact

DOES IT MEET THE DECEMBER SHAPE?

3 of 4

headcount rules met

four to open, three to close (four on Saturday), five at 22:00, 14 and 10 at the weekend · today meets 0 of 4

HOW TIRING IS IT?

0

fatigue factors present, of 25

advisory — present means worth a look, not a breach · today 5 · fewest in the folder 0

DOES IT FOLLOW THE TRAINS?

67.9

weekday demand fit — lower is closer

Saturday 8.1 · Sunday 35.8 · today 51.1 · best in the folder 21.9

IS IT FAMILIAR?

4 of 26

shift times people work today

22 new, listed on page 5 · 11 of 20 weeks are one turn (today 7 of 16)

5 in 24

full weekends off

21% of the rotation, against 20% today (4 in 20) · most in the folder 25%

4 cover weeks

lines 1, 7, 13, 19

evenly spaced six lines apart — today's sit at 1, 7, 12, 17

2h 11m a week

typical week-to-week move

how far the working day shifts each week — today's link moves 4h 0m a week

What this is

A proposal for the CEA link once the December 2026 timetable arrives, for a team of 24 — *By the Book* under one more rule: **no duty runs over 8h40**. That rule is not a trim. Five of *By the Book*'s eleven Monday-to-Saturday turns ran past it (its earlies reached 9h30), and a day's minutes are fixed by the contract — 14 duties paying 7,000 minutes is a mean of 8h20 — so with the ceiling twenty minutes above the mean, every duty has to sit between 7h and 8h40 and most of them near the top. The December 2026 duty table was therefore searched again from nothing under the same rules: four to open every day, three through to the close and four on a Saturday, five still on at 22:00, fourteen on a Saturday and ten on a Sunday, late turns shorter than early ones, no :05 or :10 times, at most two people on a turn, and the times set against the measured December 2026 service. It pays the 35-hour week to the minute across 20 working lines and four cover weeks.

The rotation was then searched for one thing: the rules it will be assessed against. Chiltern's 13-day limit, twelve hours between duties and the exact contract were treated as walls; the 25 ORR good-practice fatigue factors were the objective, each one scored by the workspace's own assessFatigue on every one of about a million candidate arrangements, together with the size of the week-to-week step, weekends off and an even spread of cover weeks. Only after every factor was settled was a week's coherence allowed to count — one turn a week where it costs nothing against the factors — so that a rotation is not chopped up for no fatigue gain. The rules-only version, with no such term, is on page 9 for comparison. Page 9 says how, and how to reproduce it.

What it is not. Not a recommendation and not a finished roster: nothing here has been through the roster office or a rep. The 24-line length, the four cover weeks and the December 2026 headcounts are owner-relayed figures with no document behind them (evidence class C), and the 13-day limit's policy citation is still outstanding — pages 7 and 8 say so where it applies. It clears every hard limit the tool can check — twelve hours between duties, the 13-day limit and the exact contract — which is the floor for being worth discussing.

HOW TO READ THE NUMBERS

What each figure means, and what good looks like

Every figure on this sheet is computed from the cells. On each scale: this sheet in navy, today's 20-line link as a ring, the best and worst of the other 22 sheets in the folder as gold and grey ticks.

Three things to hold. Lower is better on the fit and the fatigue count; higher is better on rest, weekends, one-turn weeks and familiarity. "Present" is not "failed" — the ORR list reports what is there. Today's link is the yardstick, not the target: it meets none of the December 2026 headcounts.

DOES IT FOLLOW THE TRAINS?

Demand fit — weekday

How closely the people on duty follow the trains through an average weekday. For each of its 18 hours, the hour's share of the staff-minutes is set against its share of the traffic; the gaps, in percentage points, are squared and added up — 0 would be a perfect match. The typical hourly gap is the square root of the score ÷ 18: about 1.9 points here, 1.7 today.

What it does not tell you. It compares shares, not headcount — adding people evenly to every hour changes nothing — and the station rosters posts that need someone whether the hour carries 23 trains or 5, so a flatter day can be right and still score worse.

Saturday **8.1** (today 45.7, folder best 8.1) · Sunday **35.8** (today 65.9, best 20.9). Each day type has its own curve and window, so a Saturday is only compared with a Saturday.

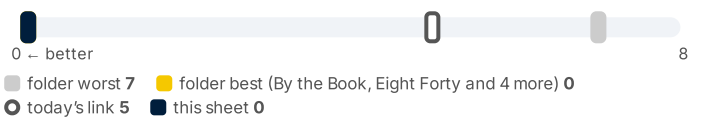

On page 6.

HOW TIRING IS IT?

Fatigue factors present

How many of the 25 roster patterns on the Office of Rail and Road's good-practice list appear anywhere in the rotation — long runs of earlys, short gaps between duties, start times that jump — counted by the workspace's own module.

What it does not tell you. A factor present is worth a look, never a breach: the ORR says the list is guidance, not limits. Zero does not mean approved and one does not mean unsafe; page 8 names which, and how big.

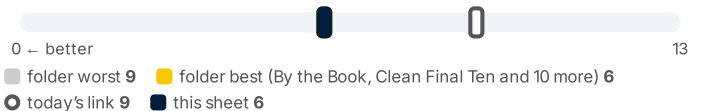

On page 8.

CAN IT BE RUN?

Longest run of worked days

The most consecutive days anyone works in the worst case — a cover week's four duties placed as badly as they can be. Chiltern's limit is 13; the workspace's own target is 6.

What it does not tell you. The roster clerk decides where cover-week duties fall, so the as-rostered figure can be lower; page 8 shows both readings.

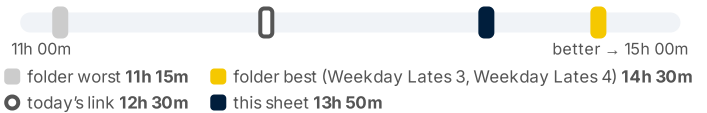

On page 7.

CAN IT BE RUN?

Tightest rest between duties

The shortest gap anywhere between one duty ending and the next beginning — Saturday into Sunday and the last line into the first included. Twelve hours is the floor; a design under it cannot be run.

What it does not tell you. It is one gap. A rotation with many 12h05 rests and one with none read the same here; the count under 12h is in the chips on page 1.

On page 7.

WHAT IS IT LIKE TO WORK?

Full weekends off

The share of weeks with both Saturday and Sunday off. Today's link gives 4 in 20, one weekend in 5; this sheet gives 5 in 24, about one in 5.

What it does not tell you. A weekend off beside a 42-hour week is still a weekend off; the hours by week are on the grid, page 4.

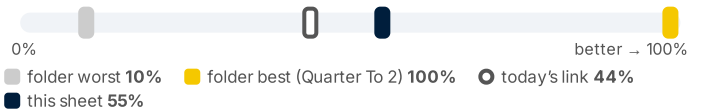

On page 5.

WHAT IS IT LIKE TO WORK?

Working weeks on one turn

The share of working weeks where a person keeps the same clock time all week. A week that mixes an early and a late is what people mean by "all over the place".

What it does not tell you. One turn all week can still be a bad week if the turn is long; the week-to-week move and the duty lengths are on pages 5 and 8.

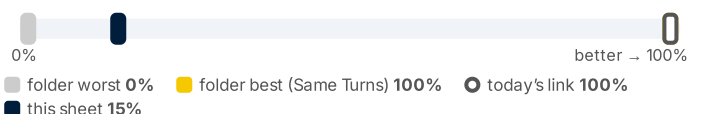

On page 5.

IS IT FAMILIAR?

Shift times people work today

The share of this sheet's clock times that somebody on the 20-line link already works. It is the folder's proxy for how much there is to learn and to accept.

What it does not tell you. Familiar is not the same as popular — a time everyone works and nobody likes still counts — and a new time in one week is not the same as one in ten. The duty table on page 5 lists the new ones.

On page 5.

BEFORE THE FIGURES

The decision this sheet supports

What is being decided, which criteria are hard and which are the room's, how much each figure can bear, and what no page here can tell you. Read this before the tiles.

The question

Should the link for the December 2026 timetable be built from the December 2026 timetable rules and the measured timetable, accepting shift times nobody works today, or keep today's times?

By the Book 2 is a rules-first table with the ticket office rostered. It is read against **Quarter To (QT-24-Q34)**, the only one of the three cases for keeping today's times with no fatigue factor present — not against every design in the folder.

The criteria, in three tiers

HARD — A DESIGN MEETS THESE OR CANNOT BE RUN

- ✓ Twelve hours between duties — met, tightest 13h 50m
- ✓ Chiltern's 13-day limit — longest run 6 days
- ✓ The 35-hour contract, exactly — 35h 00m

SOFT — THE ROOM WEIGHS THESE AGAINST EACH OTHER

- December 2026 headcounts met: **3 of 4** (today 0 of 4)
- Fatigue factors present: **0** (today 5)
- Demand fit weekday · Sat · Sun: **67.9** · 8.1 · 35.8 (today 51.1 · 45.7 · 65.9; lower is closer)
- Times worked today: **4 of 26** · full weekends off: **5** in 24 (today 4 in 20)

PREFERENCE — STAFF'S TO STATE, NOT THE TOOL'S

- Early against late: earlies 7h 00m–8h 40m, lates 7h 05m–8h 40m
- 22 of 26 clock times are new — the duty table on page 5 lists them
- The longest duty, 8h 40m, and who holds it
- Cover weeks at lines 1, 7, 13, 19

How much to trust each figure

FIGURE ON THESE PAGES	WHERE IT COMES FROM	WEIGHT
0 rests under 12h · 35h 00m contract · 14/10 at the weekend	Computed from the cells; re-computed by the workspace on import	Firm
Longest run 6 days, inside 13	Computed; the 13-day limit's policy citation is still outstanding	Firm figure , unconfirmed threshold
Four at the open, three to close, 14 and 10 at the weekend	Owner-relayed December 2026 headcounts with no document behind them (class C)	Provisional
0 fatigue factors present	The ORR's 2021 list, which it states are not limits; 4 factors still "definition to confirm"	Advisory only — never pass or fail
Demand fit 67.9 · 8.1 · 35.8	Measured timetable, one share-based measure on one December 2026 timetable curve	Indicative
4 of 26 times are today's	Computed against the live 20-line link	Firm , but a proxy for acceptability
Search score 19060	The annealer's own objective; page 9 explains it	Do not weigh

What no page here can tell you

- Whether the people who would work them accept a table in which 22 of 26 times are new (page 5 lists them) — familiarity is measured as "times worked today", which is a proxy for acceptability, not acceptability.
- Whether the roster clerk splits a cover week day-on-day-off. It is the one thing that moves the 48-hour-break figure (11 as a block, 12 split), and the link does not decide it.
- How leave and sickness cover land on a 24-line link with four cover weeks (lines 1, 7, 13, 19); nothing here models absence.
- Whether the December 2026 timetable demand curve holds on Wembley event days — the Saturday weighting approximates them, and the curve is a measured timetable, not a footfall count.

Before it is frozen

Lines 2, 3, 4, 5, 6 hold the times nobody works today; the people who would work those weeks read them first and say in one line each what they would change. The roster office answers the cover-week question. Someone confirms the source of the 13-day limit. Only then does the factor count on page 8 mean anything, and only then is this sheet more than an aid to a conversation.

THE ROTATION

The 24-line link

Sunday to Saturday per line; everyone moves down one line each week and line 24 goes back to line 1. Hours and days at the right, cover beneath.

Early turns Late turns Cover (spare) week — four duties of seven, any turn Rest day

Mon-Sat hours average 35h 00m over 24 lines, a cover week counted as a contracted week · days worked average over the 20 working lines · Turns: distinct clock times Monday to Friday, **bold** where the week is one turn (one clock time Mon-Fri and one early-or-late family across every worked day — the page 1 figure) · Minutes: duty minutes per day, and Mon-Sat is the contract (20 × 35h = 42,000)

The words on this page

Link — the whole rota: 24 weeks laid out as 24 lines. Everyone works line 1, then line 2, and so on round the wheel; the link needs 24 people.

Turn — a shift time, such as 06:20-13:45. An **early** starts before 09:00; a **late** starts after.

Cover (spare) week — a week with no fixed times. You work four duties of the seven days, placed by the roster clerk to cover leave and sickness.

The contract — 35 hours a week, averaged over the 24 lines; a cover week counts as a full contracted week.

Line — one week of the pattern, Sunday to Saturday. You move down a line each week, and line 24 goes back to line 1.

Rest day (RD) — a day off inside the contracted week. Two together make a proper break; one on its own does not count as a 48-hour break.

Sunday — not part of the contract. A Sunday duty is rest-day working, paid on top of the week, which is why the hours are shown Mon-Sat and all week.

One-turn week — the same clock time all week (shown bold in the Turns column); the easiest kind of week to live around.

How a week compares with today

Nothing here was asked to resemble today's roster; this is how close the fatigue factors took it on their own, and where the December 2026 duty table differs

The shape of a week, against today

MEASURE	TODAY (20)	PROPOSED (24)
Working weeks that are one turn (one clock time Mon–Fri)	7 of 16	11 of 20
Weeks mixing early and late turns	7	5
Rest-day breaks that are two days or more	13 of 17	18 of 25
Single rest days between duties (not a 48h break)	4	7
Days worked in a week (lines × days)	1×3, 3×4, 11×5, 1×6	6×4, 14×5
Cover (spare) weeks (whole weeks)	lines 1, 7, 12, 17	lines 1, 7, 13, 19
Distinct shift times (4 on today's roster)	18	26
Mon–Sat hours, average week (the contract)	35h 00m	35h 00m
Sunday duties (not contracted; half the working lines)	8 of 16 lines	10 of 20 lines

Changed — the December 2026 headcount

PEOPLE ON DUTY	TODAY	PROPOSED	WHY
Monday to Friday	11–12	14	the contract: 20 working lines × 35h has to be worked somewhere
Saturday	10	14	owner's figure for December 2026, leaning late for events
Sunday	8	10	owner's figure for December 2026
Opening at 06:20 (07:15 Sunday) wk · Sat · Sun	4 · 4 · 3	4 · 4 · 4	four to open, every day — met
Through to the close (23:55; 23:25 Sunday) wk · Sat · Sun	2 · 2 · 3	3 · 4 · 3	three to close, four on a Saturday — met
Still on duty at 22:00 wk · Sat · Sun	4 · 2 · 3	5 · 7 · 4	five from 22:00, Monday to Saturday — not met: Saturday 7

The duty table — the December 2026 timetable rules under 8h40, beside today's

DECEMBER 2026 TURN	WK	SAT	SUN
06:20–13:45 7h 25m · Early	1		
06:20–13:55 7h 35m · Early		1

15:45–23:55 8h 10m · Late	1	1	
15:50–23:55 8h 05m · Late	1	1	
15:55–23:25 7h 30m · Late			1
15:55–23:55 8h 00m · Late		1	
16:00–23:25 7h 25m · Late			1
16:20–23:55 7h 35m · Late	1		

Read the table in three blocks: 6 turns Monday to Saturday alike (and 5 the weekday keeps to itself), Saturday's own 6, and Sunday's 9 for its 07:15–23:25 window. Openers stagger by their finish and closers by their start so nobody hands over a cliff. 15 of the 35 start and finish instances sit on :00, :15, :30 or :45; the 16 that do not (07:20, 10:55, 13:55, 14:50, 14:55, 15:20, 15:35, 15:40, 15:50, 15:55, 16:20, 16:25, 17:55, 19:35, 22:25, 22:50) are what four distinct opener finishes cost under a cap that leaves the long earlies about twenty minutes of room — *By the Book* has three such times.

TODAY'S TURN (NONE IS REUSED)	WK	SAT	SUN

14:30–22:00 7h 30m		2	
14:30–23:25 8h 55m			3
14:45–23:55 9h 10m		2	
15:15–23:55 8h 40m	2		

06:20–13:45 is the one short early; every other early (8h 30m–8h 40m) is longer than every late (7h 35m–8h 30m) — the lever against unpopular lates, at the only size the cap allows: the shortest long early is 0 minutes longer than the longest late, where *By the Book* had fifteen and an hour on average. 4 of the 26 turns are times people work today (06:20–13:45, 06:20–14:50, 13:30–22:00, 14:00–22:30) — the same trade as *By the Book*, and the question to put to the room rather than to the tool.

People on duty, hour by hour

Cover today and proposed against the measured December 2026 timetable (arrivals and departures, weighted by train length). A darker orange hour carries more of the day's traffic.

How to read it: each blue cell is the number of people on duty in that hour (darker blue = more people). The orange row is the timetable — how much of the day's trains that hour carries (darker orange = busier). Read the columns top to bottom: cover should be thickest where the orange is darkest. The **fit** figure at the right end of each row scores that match for the whole day.

Monday to Friday window 06:20–23:55 · one row per distinct weekday

Spare cover is not in these figures — a cover week carries no times, so the rows are a floor. **Fit** is one number for how closely the people on duty follow the trains through the day: 0 would be a perfect match, lower is better, and today's link scores what it scores. (For the record: the squared gap between each hour's share of the day's traffic and its share of the cover, inside the day's window, measured on duty minutes — so an hour a duty only touches counts in proportion; the cells above count heads.) It is the measure the searched tables were chosen on, and the fit of the average weekday is the *Wk fit* on page 9. Sunday: 5 December 2026 timetable movements fall after the 23:25 finish (the last at 23:54, three of them arrivals) — the standing question on whether Sunday's window moves; the window is stored per design, so the proposal can be rebuilt to either answer.

Reading it. The table's times were searched against this curve on a five-minute grid, so the cover follows the traffic as closely as the day's fixed minutes allow. The proposal raises the whole day rather than reshaping it, which is what the December 2026 timetable brief asked for — the station rosters posts (ticket office, gateline, passenger assist) plus break cover, and a post needs someone on it whether the hour carries 23 trains or 5. The one hour the search was allowed to favour is Saturday's 17:00–22:00, for events. The weekday's two peaks are a duty length apart, so cover stays fairly flat between them by arithmetic, not neglect.

The checks sheet

Hard limits first — met or not. Then the ORR good-practice fatigue factors, which report what is present and never pass or fail a design.

Hard limits — a design either meets these or cannot be run

- ✓ **More than 13 consecutive days worked** — longest possible run **6** days (today: 9)
Longest possible run is 6 days, within the 13 configured here from Chiltern practice (origin: the legacy Hidden standard). A spare week is 4 duties of 7 and the roster clerk places them, so this is the worst case the link allows. Worked as a BLOCK of four rather than split day-on-day-off, the answer is the same — **6** days — so this row does not depend on how a cover week is placed.
Basis: Chiltern roster policy, citation outstanding — legacy Hidden 13-in-14 standard. Configured from Chiltern practice; the policy citation is outstanding, so this is stated as the app states it.
- ✓ **At least 12 hours between duties** — **0** rests under 12h anywhere in the rotation, Saturday-into-Sunday and line-into-line included (today: 0)
Tightest anywhere: **13h 50m — line 21 Fri 09:15-17:55 into Sat 07:45-16:25** (today's tightest: 12h 30m). The generator refuses a design it cannot repair to this; the search here never produced one.
- ✓ **The contracted week, exactly** — **35h 00m** average Mon-Sat over the 24 lines, cover weeks counted as contracted weeks
700h of duty a week across 20 working lines. Sundays (79.67h) sit on top as RDW, as they do today. Individual weeks range 24h 30m–43h 20m; only the average is the contract.

December 2026 timetable design figures — the staffing shape agreed for the new timetable

RULE	PROPOSAL	
Four on at the open, every day	✓ 4 weekday · 4 Saturday · 4 Sunday	
Three through to the close; four on a Saturday	✓ 3 weekday · 4 Saturday · 3 Sunday	
Five still on duty at 22:00	× 5 weekday · 7 Saturday	a 22:00 finish is not "on at 22:00"
Fourteen on a Saturday, ten on a Sunday	✓ 14 · 10	
Four cover weeks, evenly spread	✓ lines 1, 7, 13, 19 — gaps 6, 6, 6, 6	whole weeks, never scattered days
About 4.2 days a week worked, Mon-Sat	✓ 4.20 over the 20 working lines	
No :05 or :10 times except the open and close	✓ none	today's times already obey this
Late turns slightly shorter than most earlies	× weekday not met (lates 7h35–8h30, earlies 7h25–8h40) · Saturday not met (lates 7h50–8h30, earlies 7h35–8h40) · Sunday not met (lates 7h05–8h30, earlies 7h00–8h40)	incompatible with keeping today's times: meeting it needs 9h+ earlies or 15 duties a day — flagged for decision, below
No duty over 8h40	✓ longest 8h40	every day class — By the Book's longest is 9h30, today's 9h10

To settle before it is frozen

The ticket office is written in, and it changed what the rules could give. Two 14:00–22:30 turns Monday to Saturday and two 13:30–22:00 on a Sunday were fixed before anything else was searched (owner, 22 Sep 2026). They sit outside the early-versus-late ordering rule, which an 8h30 late would otherwise make unsatisfiable under an 8h40 ceiling. **Two pins are read differently for them, and only for them:** "five still on at 22:00" is a floor (four Saturday closers plus the pair make six by arithmetic, and the rule exists so the evening is not thin), and a pinned turn finishing AT 22:00 counts as on at 22:00, while design duties keep the strict reading, so *Eight Forty's* Saturday assesses as before. **Fit before count** (owner): 67.9 weekday, 8.1 Saturday, 35.8 Sunday against *Eight Forty's* 70.4, 16.2 and 20.9. Saturday's 8.1 is level with *By the Book's* for the best in the folder; Sunday is the price — the pair sits across its quietest afternoon, and Sunday pays 4,780 minutes against 4,820. **Familiarity.** 4 of 26 turns are times people work today (06:20–13:45, 06:20–14:50, 13:30–22:00, 14:00–22:30). **Sunday's finish** — five December 2026 timetable movements fall after 23:25; the window is inherited, not decided.

ORR fatigue factors

Good practice guidelines — Fatigue Factors, p3 (December 2021). $\triangle$ present — the pattern is in this design and worth a look, not a breach · $\checkmark$ clear — it is not · $\bullet$ standing — true of the station itself, not of any design · — does not apply here. This is the list the link is assessed against.

The Office of Rail and Road lists 25 roster patterns that tend to tire people — long runs of earlys, short gaps between duties, start times that jump about. For each one this table asks whether the pattern is in the rotation, today and proposed, and how big it is. The list is guidance: a factor present is a question for the room, never a pass or a fail, and a design showing nothing is not thereby approved.

CODE	FACTOR	TODAY'S LINK	PROPOSED
FF1	Night shift covering 00:00–05:00 Time of day	--	--
FF2	Early shift starting 05:00–07:00 Time of day	$\bullet$ 24	$\bullet$ 24

FF20	First night shift Night shifts	--	--
FF13	Less than 12h rest in any 24h Intervals between duties	$\checkmark$ 0	$\checkmark$ 0

Present: 0 (today 5) · standing: 2 · FF2 fires on every 06:20 duty, so it is a property of the station's opening time rather than of any design. **Two readings of a cover week, on the one row they move.** A cover week is worked four days of seven and the link does not say which four, so a run figure is a range. The headline number is the ceiling — the four split day-on-day-off, which supplies no 48-hour break and joins the blocks either side. It is reachable: of the 35 ways to place four duties in seven days, the 10 that leave no two rest days together produce exactly it. Worked as a BLOCK, which is what a cover week looks like on the roster, the three rest days fall together and the week always supplies a break — that is the *as rostered* figure beneath it. Checked on every row: FF11 is the only one where the two differ. Which reading applies is a question for the roster office, not for this sheet. This sheet is an aid to a conversation, not a fatigue risk assessment.

How it was chosen

Reproducible: the same table, seed and objective give the same grid on any machine

Lineage. Family B2 — “Eight Forty” (EF-24-E21 · 0cf19f56) with the ticket office written in: two 14:00–22:30 turns every day Monday to Saturday and two 13:30–22:00 on a Sunday, fixed before the rest of the day was searched. Same 8h40 ceiling, same December 2026 timetable rules, demand fit ahead of the count of distinct times (owner, 22 Sep 2026). The rotation was then searched for the ORR factors exactly as “By the Book” and “Eight Forty” were. Compare with “Eight Forty”, “By the Book” (BB-24-D7 · 0f14abce) and “Same Turns” (ST-24-B7 · d15e1b74).

In plain terms. A computer took each day's duties as fixed and tried over a million different ways of arranging them across the 24 weeks, scoring every arrangement on the rules on pages 7 and 8, and kept the best. The “seed” is the number that makes that run repeat exactly on any machine, so anyone can rebuild this grid and get the same cells.

How it was chosen

1 · The table. The December 2026 timetable rules under the 8h40 cap, with two ticket-office turns fixed first — 14:00–22:30 twice a day Monday to Saturday, 13:30–22:00 twice on a Sunday — and the rest of each day searched around them. The table was not annealed: table-book.mjs's own search walks lengths and starts together and, with two duties pinned, reports no feasible table where one exists. So every legal set of duty LENGTHS was enumerated with the pinned pair taken out (PIN_N/PIN_MIN), and each one was placed (place-structures.mjs) — 139,017 weekday structures, 12 feasible; 18,616 Saturday, 931; 24,942 Sunday at its total, 3601. The pick was demand fit first, then the count of distinct times (owner). The pinned pair sits outside the early-versus-late ordering rule and counts as on at 22:00 when it finishes there; page 7 says why, and every other rule counts it.

2 · The grid. Simulated annealing over the 24-line grid: 100,000 candidate arrangements per restart, five restarts from different random starting points per run, four seeded runs — over a million candidates in all — then a steepest-descent polish of every same-

day swap and every pair of lines. Every move keeps each day's duties exactly as the table says — a swap between two lines on one day, or two whole lines changing places — so the coverage, the contract and the headcounts are true by construction and only the SHAPE is searched. Cover weeks stay at lines 1, 7, 13 and 19 throughout.

3 · The judge. Every candidate was scored by the workspace's own modules — runDesignChecks, assessFatigue, assessHardLimits, scoreOrder — with a rest under 12h or a run past six days costing more than everything else combined, then every fatigue factor present (each one, and its size: the length of an early block, the hours in seven days, each start-time jump, each backward step), then the week-to-week step and the length of a block on the same sort of week. Then, at a weight no factor can be traded for, the coherence of a week (one turn, its weekend variant) and fairness: four to five days a week, no single rest day between duties. Weekends off and long weekends were rewarded. Last, the app's line-order optimiser was offered the result and kept only where it improved that score.

Alternatives measured

DESIGN	RUN	FF PRESENT	WKENDS	ONE-TURN	STEP	WK FIT	SCORE
B2-24-G21 · 02f3c005 — By the Book 2 (this proposal)	6	0	5	11/20	2h 11m	67.9	19060
B2-24-G13 · cf3b1372 — runner-up	6	1	6	11/20	1h 41m	67.9	62810
Workspace default · 29ec9810 (Dec 2026 table, generated)	7	5	5	0/20	4h 16m	30.8	2192436
EF-24-E21 · 0cf19f56 — Eight Forty (a sibling proposal)	6	0	6	10/20	1h 31m	70.4	—
BB-24-D7 · 0f14abce — By the Book (a sibling proposal)	6	0	6	12/20	2h 52m	30.8	—
ST-24-B7 · d15e1b74 — Same Turns (a sibling proposal)	6	1	6	18/20	2h 33m	46.3	—
Today's 20-line link (for scale)	9	5	4	7/16	4h 0m	51.1	—

How the winner was picked: rules first (rest, run, fatigue factors present, weekends off), then *Wk fit* — how evenly the weekday cover follows the December 2026 timetable traffic curve (lower is better; today's link scores what it scores). Fatigue factors present decided it (0 against 1 for the runner-up). The other 2 seeded results are in results/ (G7, G34); none stands higher on the pick than the rows shown. Score is the search's own feel objective (lower is better) and is not a verdict. The workspace default is the app's own December 2026 duty table, generated and reordered with every switch on — a good design by every panel, and not one that resembles today's.

LOAD IT

The rotation, ready to paste

Line number, then Sunday to Saturday. SP is a cover week. Paste the whole block into Links → Import.

Links → Import, then paste the whole block below. Line number, then Sunday to Saturday; SP is a cover week. The workspace re-runs every check on these pages from the pasted cells, so nothing here has to be taken on trust — and the two designers can edit it there like any other design.

The same rotation is also supplied beside this PDF as By-the-Book-2-B2-24-G21-import.txt (tab-separated, pastes directly) and By-the-Book-2-B2-24-G21.json (the app's own format).

Prepared 22 September 2026 · re-rendered 28 September 2026. The code **02f3c005** in every footer is the design's fingerprint — eight characters computed from these 168 cells and nothing else. If the workspace shows the same code after you paste, you have exactly this design; if one cell differs, the code changes. Every figure in this document was computed by the Marylebone Roster app's Links modules (v24.35) from exactly these cells; import them and the workspace's Design checks, hard limits, fatigue factors and coverage cards will restate them.
