

# Proposed CEA Link — December 2026

A 24-line link supplied as a Word table and assessed here — weekday lates at 16:25, Saturdays left as they are, and every turn a time people already work

Prepared 18 September 2026 · re-rendered 25 September 2026 · built for the December 2026 timetable and assessed by the workspace's own rule modules (Marylbone Roster v24.22) · figures on this page are computed, not typed

## PROPOSAL

# Weekday Lates

Weekday lates at 16:25, Saturdays untouched

CODE **WL-24-EXT**

FINGERPRINT **a52ec588**

BUILT FROM duty table — · seed — · 24 lines · 4 cover weeks

✓ **24** lines designed

✓ **35h 00m** a week — exactly the contract

✓ **0** hard-limit breaches

✓ **0** rests under 12h

⚠ **5** fatigue factors present — 4 as rostered (today: 5)

Five questions a manager asks first, in order. Every figure is computed from the cells; **page 2 says how to read each one**, with today's link and the rest of the folder marked on a scale.

### CAN IT BE RUN?

**Yes**

#### the hard limits

0 rests under 12h · longest run 9 of 13 · contract exact

### DOES IT MEET THE DECEMBER SHAPE?

**0 of 4**

#### headcount rules met

four to open, three to close (four on Saturday), five at 22:00, 14 and 10 at the weekend · today meets 0 of 4

### HOW TIRING IS IT?

**5**

#### fatigue factors present, of 25

advisory — present means worth a look, not a breach · today 5 · fewest in the folder 0

### DOES IT FOLLOW THE TRAINS?

**38.3**

#### weekday demand fit — lower is closer

Saturday 20.7 · Sunday 62.4 · today 44.7 · best in the folder 30.7

### IS IT FAMILIAR?

**13 of 18**

#### shift times people work today

5 new, listed on page 5 · 7 of 20 weeks are one turn (today 7 of 16)

**6 in 24**

#### full weekends off

25% of the rotation, against 20% today (4 in 20) · most in the folder 25%

**4 cover weeks**

#### lines 1, 7, 12, 17

gaps of 8, 6, 5, 5 around the wheel — today's sit at 1, 7, 12, 17

**4h 43m a week**

#### typical week-to-week move

how far the working day shifts each week — today's link moves 4h 0m a week

## What this is

A proposal for the CEA link once the December 2026 timetable arrives, for a team of 24 rather than 20. The brief was to keep the **feel** of the link people work today — a week is one turn, rest days come in pairs, four whole cover weeks spread round the rotation, and the same 06:20 / 08:00 / 14:00 / 15:15 clock times — while meeting the staffing shape agreed for December 2026 (four to open every day, three through to the close, four on a Saturday, five still on at 22:00, fourteen on a Saturday, ten on a Sunday) and every rule the link is assessed against: Chiltern's 13-day limit, twelve hours between duties, the exact 35-hour contracted week, and the ORR's good-practice fatigue factors.

It was not drawn by this app. It arrived as a Word table — a proposal from outside the workspace — and was read straight into the app's own shape, then judged by the same modules that judge a design the workspace generated itself: runDesignChecks, weeklyHours, assessHardLimits, assessFatigue, scoreOrder and calcHourlyCoverage. There is no search behind it and nothing to reproduce; what can be checked is every figure on these pages, each computed from the cells on page 8. Paste those cells into Links → Import and the workspace restates all of it.

**What it is not.** Not a recommendation and not a finished roster: nothing here has been through the roster office or a rep. The 24-line length, the four cover weeks and the December 2026 headcounts are owner-relayed figures with no document behind them (evidence class C), and the 13-day limit's policy citation is still outstanding — pages 7 and 8 say so where it applies. It clears every rule the tool can check, which is the floor for being worth discussing.

## HOW TO READ THE NUMBERS

# What each figure means, and what good looks like

Every figure on this sheet is computed from the cells. On each scale: this sheet in navy, today's 20-line link as a ring, the best and worst of the other 20 sheets in the folder as gold and grey ticks.

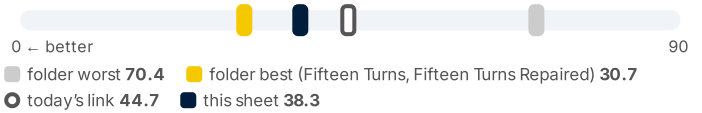

**Three things to hold.** Lower is better on the fit and the fatigue count; higher is better on rest, weekends, one-turn weeks and familiarity. "Present" is not "failed" — the ORR list reports what is there. Today's link is the yardstick, not the target: it meets none of the December 2026 headcounts.

### DOES IT FOLLOW THE TRAINS?

#### Demand fit — weekday

How closely the people on duty follow the trains through an average weekday. For each hour, its share of the day's staff-minutes is compared with its share of the timetable's traffic; the gaps are squared and added up. 0 would be a perfect match; a score near 25 means each hour is about one percentage point off its share, near 50 about one and a half.

**What it does not tell you.** It compares shares, not headcount — adding people evenly to every hour changes nothing — and the station rosters posts that need someone whether the hour carries 23 trains or 5, so a flatter day can be right and still score worse.

Saturday **20.7** (today 45.7, folder best 8.1) · Sunday **62.4** (today 65.9, best 20.9). Each day type has its own curve and window, so a Saturday is only compared with a Saturday.

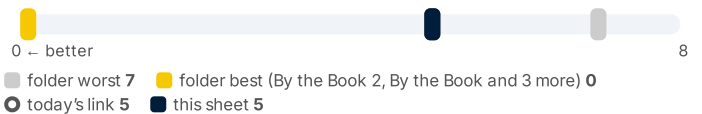

On page 6.

### HOW TIRING IS IT?

#### Fatigue factors present

How many of the 25 roster patterns on the Office of Rail and Road's good-practice list appear anywhere in the rotation — long runs of earlys, short gaps between duties, start times that jump — counted by the workspace's own module.

**What it does not tell you.** A factor present is worth a look, never a breach: the ORR says the list is guidance, not limits. Zero does not mean approved and one does not mean unsafe; page 8 names which, and how big.

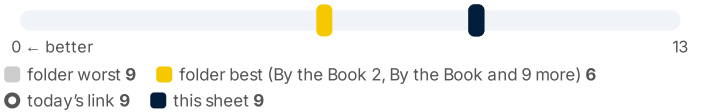

On page 8.

### CAN IT BE RUN?

#### Longest run of worked days

The most consecutive days anyone works in the worst case — a cover week's four duties placed as badly as they can be. Chiltern's limit is 13; the workspace's own target is 6.

**What it does not tell you.** The roster clerk decides where cover-week duties fall, so the as-rostered figure can be lower; page 8 shows both readings.

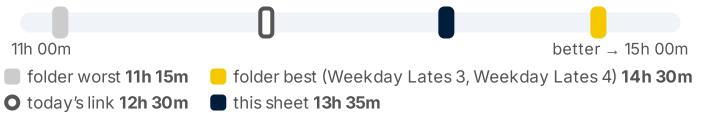

On page 7.

### CAN IT BE RUN?

#### Tightest rest between duties

The shortest gap anywhere between one duty ending and the next beginning — Saturday into Sunday and the last line into the first included. Twelve hours is the floor; a design under it cannot be run.

**What it does not tell you.** It is one gap. A rotation with many 12h05 rests and one with none read the same here; the count under 12h is in the chips on page 1.

On page 7.

### WHAT IS IT LIKE TO WORK?

#### Full weekends off

The share of weeks with both Saturday and Sunday off. Today's link gives 4 weekends in 20; a 24-line link with six is the same one weekend in four.

**What it does not tell you.** A weekend off beside a 42-hour week is still a weekend off; the hours by week are on the grid, page 4.

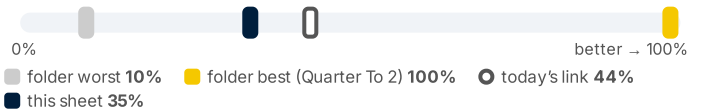

On page 5.

### WHAT IS IT LIKE TO WORK?

#### Working weeks on one turn

The share of working weeks where a person keeps the same clock time all week. A week that mixes an early and a late is what people mean by "all over the place".

**What it does not tell you.** One turn all week can still be a bad week if the turn is long; the week-to-week move and the duty lengths are on pages 5 and 8.

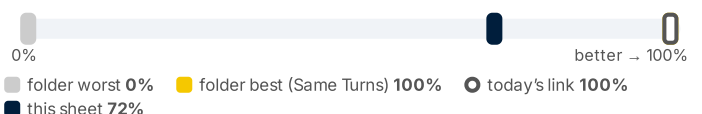

On page 5.

### IS IT FAMILIAR?

#### Shift times people work today

The share of this sheet's clock times that somebody on the 20-line link already works. It is the folder's proxy for how much there is to learn and to accept.

**What it does not tell you.** Familiar is not the same as popular — a time everyone works and nobody likes still counts — and a new time in one week is not the same as one in ten. The duty table on page 5 lists the new ones.

On page 5.

BEFORE THE FIGURES

The decision this sheet supports

What is being decided, which criteria are hard and which are the room's, how much each figure can bear, and what no page here can tell you. Read this before the tiles.

The question

Should the link for the December 2026 timetable be the hand-built Weekday Lates line, in this revision, accepting 12 on a Saturday against the agreed 14 and 0 of the four December 2026 headcount rules met, for a week shape its authors chose?

**Weekday Lates** is read two ways: against **Quarter To (QT-24-Q34)** and **By the Book (BB-24-D7)**, the two searched answers; and within its own line, against the revision before it.

The criteria, in three tiers

**HARD — A DESIGN MEETS THESE OR CANNOT BE RUN**

✓ Twelve hours between duties — met, tightest 13h 35m

✓ Chiltern's 13-day limit — longest run 9 days

✓ The 35-hour contract, exactly — 35h 00m

**SOFT — THE ROOM WEIGHS THESE AGAINST EACH OTHER**

December 2026 headcounts met: **0 of 4** (today 0 of 4)

Fatigue factors present: **5** worst case, 4 as rostered (today 5)

Demand fit weekday · Sat · Sun: **38.3** · 20.7 · 62.4 (today 44.7 · 45.7 · 65.9; lower is closer)

Times worked today: **13 of 18** · full weekends off: **6** in 24 (today 4 in 20)

**PREFERENCE — STAFF'S TO STATE, NOT THE TOOL'S**

Early against late: earlies 7h 15m–8h 30m, lates 7h 30m–9h 10m

The 5 new times: 07:00-15:30, 08:00-16:00, 08:30-17:00, 10:30-19:00, 16:25-23:55

The longest duty, 9h 10m, and who holds it

Cover weeks at lines 1, 7, 12, 17

How much to trust each figure

| FIGURE ON THESE PAGES                                      | WHERE IT COMES FROM                                                                          | WEIGHT                                      |
|------------------------------------------------------------|----------------------------------------------------------------------------------------------|---------------------------------------------|
| 0 rests under 12h · 35h 00m contract · 12/9 at the weekend | Computed from the cells; re-computed by the workspace on import                              | <b>Firm</b>                                 |
| Longest run 9 days, inside 13                              | Computed; the 13-day limit's policy citation is still outstanding                            | <b>Firm figure</b> , unconfirmed threshold  |
| Four at the open, three to close, 14 and 10 at the weekend | Owner-relayed December 2026 headcounts with no document behind them (class C)                | <b>Provisional</b>                          |
| 5 fatigue factors present                                  | The ORR's 2021 list, which it states are not limits; 4 factors still "definition to confirm" | <b>Advisory only</b> — never pass or fail   |
| Demand fit 38.3 · 20.7 · 62.4                              | Measured timetable, one share-based measure on one December 2026 timetable curve             | <b>Indicative</b>                           |
| 13 of 18 times are today's                                 | Computed against the live 20-line link                                                       | <b>Firm</b> , but a proxy for acceptability |

What no page here can tell you

- Whether the people who would work them accept the times nobody works today (07:00-15:30, 08:00-16:00, 08:30-17:00, 10:30-19:00, 16:25-23:55) — familiarity is measured as "times worked today", which is a proxy for acceptability, not acceptability.
- Whether the roster clerk splits a cover week day-on-day-off. It is the one thing that moves the 48-hour-break figure (10 as a block, 14 split), and the link does not decide it.
- How leave and sickness cover land on a 24-line link with four cover weeks (lines 1, 7, 12, 17); nothing here models absence.
- Whether the December 2026 timetable demand curve holds on Wembley event days — the Saturday weighting approximates them, and the curve is a measured timetable, not a footfall count.

Before it is frozen

Lines 2, 6, 9, 18, 19 hold the times nobody works today; the people who would work those weeks read them first and say in one line each what they would change. The roster office answers the cover-week question. Someone confirms the source of the 13-day limit. Only then does the factor count on page 8 mean anything, and only then is this sheet more than an aid to a conversation.

## THE ROTATION

## The 24-line link

Sunday to Saturday per line; everyone moves down one line each week and line 24 goes back to line 1. Hours and days at the right, cover beneath.

| LINE    | SUN              | MON               | TUE               | WED               | THU               | FRI               | SAT               | MON-SAT<br>hours | ALL WEEK<br>hours | DAYS WORKED<br>Mon-Sat | TURNS<br>Mon-Fri |

Early turns Late turns Cover (spare) week — four duties of seven, any turn Rest day

Mon-Sat hours average 35h 00m over 24 lines, a cover week counted as a contracted week · days worked average over the 20 working lines · Turns: distinct clock times Monday to Friday, **bold** where the week is one turn (one clock time Mon-Fri and one early-or-late family across every worked day — the page 1 figure) · Minutes: duty minutes per day, and Mon-Sat is the contract (20 × 35h = 42,000)

## The words on this page

**Link** — the whole rota: 24 weeks laid out as 24 lines. Everyone works line 1, then line 2, and so on round the wheel; the link needs 24 people.

**Turn** — a shift time, such as 06:20-13:45. An **early** starts before 09:00; a **late** starts after.

**Cover (spare) week** — a week with no fixed times. You work four duties of the seven days, placed by the roster clerk to cover leave and sickness.

**The contract** — 35 hours a week, averaged over the 24 lines; a cover week counts as a full contracted week.

**Line** — one week of the pattern, Sunday to Saturday. You move down a line each week, and line 24 goes back to line 1.

**Rest day (RD)** — a day off inside the contracted week. Two together make a proper break; one on its own does not count as a 48-hour break.

**Sunday** — not part of the contract. A Sunday duty is rest-day working, paid on top of the week, which is why the hours are shown Mon-Sat and all week.

**One-turn week** — the same clock time all week (shown bold in the Turns column); the easiest kind of week to live around.

# Same feel, more people

What this design keeps of today, and where the December 2026 headcounts differ

## Kept — the shape of a week

| MEASURE                                                  | TODAY (20)          | PROPOSED (24)              |

Busiest weekday · Saturday · Sunday. The first three columns are what the 20-line link does now; the last three are the proposal. Green cells grew, amber shrank, a struck-through row is a time the proposal does not use.

Why the duties land where they do: Monday to Saturday totals exactly 42,000 minutes, which is 20 × 35h to the minute, so the contract is paid. But unlike a table built day-uniform, **the weekdays here are not equal** — Mon 6,225 · Tue 7,205 · Wed 7,205 · Thu 7,780 · Fri 7,690, and Saturday 5,895. Monday is the lightest day by some margin and Thursday the heaviest; that is a property of the design rather than a fault, but it is the first thing to put to the roster office, because it decides how much cover each day really has.

# People on duty, hour by hour

Cover today and proposed against the measured December 2026 timetable (arrivals and departures, weighted by train length). A darker orange hour carries more of the day's traffic.

How to read it: each blue cell is the number of people on duty in that hour (darker blue = more people). The orange row is the timetable — how much of the day's trains that hour carries (darker orange = busier). Read the columns top to bottom: cover should be thickest where the orange is darkest. The **fit** figure at the right end of each row scores that match for the whole day.

## Sunday window 07:15–23:25

|                  | 05 | 06 | 07 | 08 | 09 | 10 | 11 | 12 | 13 | 14 | 15 | 16 | 17 | 18 | 19 | 20 | 21 | 22 | 23 | FIT  |
|------------------|----|----|----|----|----|----|----|----|----|----|----|----|----|----|----|----|----|----|----|------|
| TODAY            |    |    | 3  | 4  | 4  | 4  | 4  | 4  | 5  | 8  | 8  | 5  | 4  | 4  | 4  | 4  | 3  | 3  | 3  | 65.9 |
| PROPOSED         |    |    | 3  | 4  | 4  | 5  | 5  | 5  | 6  | 9  | 9  | 6  | 5  | 5  | 4  | 4  | 4  | 3  | 3  | 62.4 |
| DEC 2026 TRAFFIC |    |    | 15 | 45 | 65 | 71 | 74 | 71 | 61 | 55 | 64 | 69 | 78 | 73 | 75 | 52 | 71 | 65 | 50 |      |

Spare cover is not in these figures — a cover week carries no times, so the rows are a floor. **Fit** is one number for how closely the people on duty follow the trains through the day: 0 would be a perfect match, lower is better, and today's link scores what it scores. (For the record: the squared gap between each hour's share of the day's traffic and its share of the cover, inside the day's window, measured on duty minutes — so an hour a duty only touches counts in proportion; the cells above count heads.) It is the measure the searched tables were chosen on, and the fit of the average weekday is the *Wk fit* on page 9. Sunday: 5 December 2026 timetable movements fall after the 23:25 finish — the standing question on whether Sunday's window moves; the window is stored per design, so this proposal can be rebuilt to either answer.

**Reading it.** The proposal raises the whole day rather than reshaping it, which is what the December 2026 timetable brief asked for — the station rosters posts (ticket office, gateline, passenger assist) plus break cover, and a post needs someone on it whether the hour carries 23 trains or 5. The weekday's two peaks are a duty length apart, so cover stays fairly flat between them by arithmetic, not neglect.

# The checks sheet

Hard limits first — met or not. Then the ORR good-practice fatigue factors, which report what is present and never pass or fail a design.

**Hard limits** — a design either meets these or cannot be run

- ✓ **More than 13 consecutive days worked** — longest possible run **9** days (today: 9)  
Longest possible run is 9 days, within the 13 configured here from Chiltern practice (origin: the legacy Hidden standard). A spare week is 4 duties of 7 and the roster clerk places them, so this is the worst case the link allows. Worked as a BLOCK of four rather than split day-on-day-off, the answer is the same — **9** days — so this row does not depend on how a cover week is placed.  
Basis: Chiltern roster policy, citation outstanding — legacy Hidden 13-in-14 standard. Configured from Chiltern practice; the policy citation is outstanding, so this is stated as the app states it.
- ✓ **At least 12 hours between duties** — **0** rests under 12h anywhere in the rotation, Saturday-into-Sunday and line-into-line included (today: 0)  
Tightest anywhere: **13h 35m — line 20 Fri 16:25-23:55 into Sat 13:30-22:00** (today's tightest: 12h 30m). The generator refuses a design it cannot repair to this; this design was checked against it, not generated.
- ✓ **The contracted week, exactly** — **35h 00m** average Mon–Sat over the 24 lines, cover weeks counted as contracted weeks  
700h of duty a week across 20 working lines. Sundays (77.25h) sit on top as RDW, as they do today. Individual weeks range 24h 30m–45h 05m; only the average is the contract.

**December 2026 timetable design figures** — the staffing shape agreed for the new timetable

| RULE                                           | PROPOSAL                                          |                                                                                                       |
|------------------------------------------------|---------------------------------------------------|-------------------------------------------------------------------------------------------------------|
| Four on at the open, every day                 | × 4 weekday · 5 Saturday · 3 Sunday               |                                                                                                       |
| Three through to the close; four on a Saturday | × 3–4 weekday · 3 Saturday · 3 Sunday             |                                                                                                       |
| Five still on duty at 22:00                    | × 4–6 weekday · 3 Saturday                        | a 22:00 finish is not "on at 22:00"                                                                   |
| Fourteen on a Saturday, ten on a Sunday        | × 12 · 9                                          |                                                                                                       |
| Cover weeks, evenly spread                     | × 4 weeks at lines 1, 7, 12, 17 — gaps 8, 6, 5, 5 | the December 2026 staffing shape asks for four, evenly spread — the count is right; the spread is not |
| About 4.2 days a week worked, Mon–Sat          | ✓ 4.35 over the 20 working lines                  |                                                                                                       |
| No :05 or :10 times except the open and close  | ✓ none                                            |                                                                                                       |
| Late turns slightly shorter than most earlies  | × not met — lates 7h30–9h10, earlies 7h15–8h30    | the longest late is longer than the longest early                                                     |

## To settle before it is frozen

**Late-turn length.** The lates here run longer than the earlies, which is the reverse of the December 2026 preference — the 14:45–23:55 Saturday closer is 9h10 against a longest early of 8h30. **Cover weeks.** Four, at lines 1, 7, 12 and 17 — the count the December 2026 staffing shape asks for, but gaps of 8, 6, 5, 5 around the wheel rather than an even six. **Sunday's finish** — five December 2026 timetable movements fall after 23:25; this design inherits today's window rather than deciding it.

# ORR fatigue factors

Good practice guidelines — Fatigue Factors, p3 (December 2021).  $\Delta$  present — the pattern is in this design and worth a look, not a breach ·  $\checkmark$  clear — it is not ·  $\bullet$  standing — true of the station itself, not of any design · — does not apply here. This is the list the link is assessed against.

The Office of Rail and Road lists 25 roster patterns that tend to tire people — long runs of earlys, short gaps between duties, start times that jump about. For each one this table asks whether the pattern is in the rotation, today and proposed, and how big it is. The list is guidance: a factor present is a question for the room, never a pass or a fail, and a design showing nothing is not thereby approved.

| CODE | FACTOR                                                                                               | TODAY'S LINK                                        | PROPOSED                                             |
|------|------------------------------------------------------------------------------------------------------|-----------------------------------------------------|------------------------------------------------------|
| FF1  | Night shift covering 00:00–05:00 <small>Time of day</small>                                          | --                                                  | --                                                   |

Present: 5 in the worst case, 4 as rostered (today 5) · standing: 2 · FF2 fires on every 06:20 duty, so it is a property of the station's opening time rather than of any design. **Two readings of a cover week, on the one row they move.** A cover week is worked four days of seven and the link does not say which four, so a run figure is a range. The headline number is the ceiling — the four split day-on-day-off, which supplies no 48-hour break and joins the blocks either side. It is reachable: of the 35 ways to place four duties in seven days, the 10 that leave no two rest days together produce exactly it. Worked as a BLOCK, which is what a cover week looks like on the roster, the three rest days fall together and the week always supplies a break — that is the *as rostered* figure beneath it. Checked on every row: FF11 is the only one where the two differ. Which reading applies is a question for the roster office, not for this sheet. This sheet is an aid to a conversation, not a fatigue risk assessment.

## METHOD

# Where it came from

Checkable rather than reproducible: there is no search behind it, and every figure is computed from the cells

**Lineage.** Supplied as a Word table and assessed here — not produced by the proposal search. Compare with “Same Turns” (ST-24-B7 · d15e1b74) and “By the Book” (BB-24-D7 · 0f14abce), both of which were built by the search and judged by the same modules.

**In plain terms.** Nobody searched for this design. It was typed in from the table exactly as supplied and the app's own rule modules measured it; nothing below was chosen by a computer. Everything on these pages can be re-checked by pasting page 10 into the Links workspace.

## Where this design came from

**1 · It was supplied, not searched.** This rotation arrived as a Word table and was read straight into the app's own shape — 24 lines, Sunday to Saturday, cover weeks as whole weeks. No table was enumerated for it, no grid was annealed and no seed produced it, so unlike *Same Turns* and *By the Book* there is no search to reproduce. What can be reproduced is every figure on these pages: they are computed from the cells opposite.

**2 · The judge is the same.** Scored by the workspace's own modules — runDesignChecks, weeklyHours, assessHardLimits,

assessFatigue, scoreOrder, calcHourlyCoverage — with no figure typed by hand and none softened. Where the design misses one of the December 2026 timetable rules, the table opposite says so rather than omitting the row.

**3 · What that means for the room.** A supplied design is judged on the same evidence as a searched one, and it carries the same class-C caveats: the 24-line length, the cover-week count and the December 2026 headcounts are owner-relayed figures, and the 13-day limit's policy citation is still outstanding. This is not a recommendation.

## Alternatives measured

| DESIGN                                                      | RUN | FF PRESENT | WKENDS | ONE- TURN | STEP   | WK FIT | SCORE |
|-------------------------------------------------------------|-----|------------|--------|-----------|--------|--------|-------|

| Workspace default · 29ec9810 (Dec 2026 table, generated)    | 7   | 5          | 5      | 0/20      | 4h 16m | 30.8   | —     |
| Today's 20-line link (for scale)                            | 9   | 5          | 4      | 7/16      | 4h 0m  | 44.7   | —     |

**How to read this table:** nothing here was picked by a search — this design was supplied or derived, and the rows are the comparisons it is being judged against. *Wk fit* is how evenly the WEEKDAY cover follows the December 2026 timetable traffic curve (lower is better; today's link scores what it scores), so it says nothing about Saturday or Sunday. **Score** is the search's own feel objective and is blank here, because no search produced this design — a blank is not a bad score. The workspace default is the app's own December 2026 duty table, generated and reordered with every switch on.

# The rotation, ready to paste

Line number, then Sunday to Saturday. SP is a cover week. Paste the whole block into Links → Import.

Links → Import, then paste the whole block below. Line number, then Sunday to Saturday; SP is a cover week. The workspace re-runs every check on these pages from the pasted cells, so nothing here has to be taken on trust — and the two designers can edit it there like any other design.

The same rotation is also supplied beside this PDF as Weekday-Lates-WL-24-EXT-import.txt (tab-separated, pastes directly) and Weekday-Lates-WL-24-EXT.json (the app's own format).

Prepared 18 September 2026 · re-rendered 25 September 2026. The code **a52ec588** in every footer is the design's fingerprint — eight characters computed from these 168 cells and nothing else. If the workspace shows the same code after you paste, you have exactly this design; if one cell differs, the code changes. Every figure in this document was computed by the Marylebone Roster app's Links modules (v24.22) from exactly these cells; import them and the workspace's Design checks, hard limits, fatigue factors and coverage cards will restate them.
